

DN33 Universal Electronic Controllers

The DN33 universal electronic controllers replace the IRDR range, offering additional features such as auto-tuning PID control and real time clock for managing working cycles and logging alarms. Temperature only versions are available with NTC, PTC or PT1000 inputs, whilst the universal versions can also accept PT100, J and K type thermocouples, DC Voltage and DC mA inputs.

The controllers feature a simple user interface, two independent control loops and are housed in a compact DIN rail mounting enclosure. All versions can be connected to a network for monitoring and programming, using the optional RS-485 serial interface. The DN33 controllers are powered from 12 to 24Vac/dc or 115-230Vac and optional transformers are available for powering the controllers from 110Vac or 230Vac.

Options**Temperature Probes**

A range of NTC, PTC, PT100 and thermocouple temperature probes are available to suit the DN33 controllers.

Remote Control

The infrared remote control allows access to all the main functions and configuration parameters for easy set up of all DN33 controllers from a distance.

Programming Key

All DN33 controllers can be programmed quickly using the optional programming key, even when not powered, reducing the risk of errors.
