IREV Refrigeration Controllers

The IREV refrigeration controllers are designed for management of refrigeration and food processing applications. The controllers have 2 NTC or 2 NTC/PTC inputs for ambient and defrost temperatures and versions are available which have 1, 2, 3 or 4 relay outputs for control of the compressor, active defrost, evaporator ventilation fan and auxiliary output.

The controllers feature a simple user interface and are housed in a compact panel mounting enclosure with touch keypad. All versions can be connected to a network for monitoring and programming, using the optional RS-485 serial interface. The IREV controllers are powered from 12 to 24Vac/dc, 115-230Vac or 230Vac and optional transformers are available for powering the controllers from 110Vac or 230Vac.

Options**Temperature Probes**

A range of NTC temperature probes are available to suit the IR33 refrigeration controllers.

Remote Control

The infrared remote control allows access to all the main functions and configuration parameters for easy set up of all IR33 controllers from a distance.

Programming Key

All IR33 controllers can be programmed quickly using the optional programming key, even when not powered, reducing the risk of errors.
